BHUMIK CHOPRA

bhumik.26043@ggnindia.dronacharya.info | +91 8178307875 https://www.linkedin.com/in/bhumik-chopra New Delhi, India

SUMMARY

A computer science graduate has a strong foundation in programming languages such as C, Python, and SQL. They understand key concepts like data structures, algorithms, and database management. Their knowledge includes software development processes and the use of version control systems. They have experience working with tools for coding, testing, and deploying applications. Additionally, they are familiar with basic computer skills like using software applications and managing data. Participation in projects helps apply theoretical knowledge to develop practical solutions. This basic skill set prepares them for various roles in software development and technology-related fields.

WORK EXPERIENCE

Intern | CNH Industrial India Private Limited (Gurgaon, India) On-site | Jun 2025 – Aug 2025

- Served as an Intern in the VMS (Vehicle Management System) Functions at CNH Industrial India Private Limited, Gurgaon ITC Office.
- Completed training and actively contributed to departmental objectives under the guidance of an assigned mentor.
- Demonstrated commendable conduct and made a positive contribution to the team during the entire training period.
- Gained valuable experience in industry processes and professional workplace collaboration.

KEY EXPERTISE

TECHNICAL SKILLS: Languages: C, C++, Python, SQL, R, Java, JavaScript, HTML, CSS
Frameworks/Libraries: React, Streamlit, Hyperledger Fabric, FastAPI
Tools: Git, GitHub, Visual Studio Code, Android Studio, Postman, DEV C++, Jupyter, Swagger UI, Docker
Databases: MongoDB, SQLite, SQL
Platforms & IDEs: Windows, Linux/Ubuntu, VSCode, Android Studio
Deployment & Hosting Platforms: Vercel, Render

SOFT SKILLS: Problem Solving, Communication, Teamwork, Adaptability, Time Management, Initiative, Collaboration, Attention to Detail, Learning Agility, Reliability.

PROJECTS

1. **NSFW Detector: -> link**
   - Developed an advanced content filtering system that integrates audio and visual media analysis to detect inappropriate material.
   - Implemented Whisper, a state-of-the-art automatic speech recognition model, to analyze audio for detecting explicit or abusive language.
   - Utilized NudEnet, a deep learning-based image recognition model specialized in identifying explicit visual content such as nudity or adult images.
   - Combined multiple AI models to provide a multi-faceted approach to content safety, useful for moderation on social media platforms, streaming services, and enterprise content management.
   - Built robust pipelines to process and classify multimedia data accurately, ensuring high precision in filtering inappropriate content.
   - The project demonstrates expertise in machine learning, deep learning frameworks, and practical applications of AI in content moderation.
2. **Hospital Management System: -> link**
   - Designed and implemented a comprehensive software solution to facilitate hospital administration and patient data management.
   - Developed using Python for backend logic and SQL for relational database management, ensuring reliable and secure handling of sensitive medical records.
   - Incorporated features such as patient admission and discharge records, doctor and nurse scheduling, and inventory management of medical supplies.
   - Developed user-friendly interfaces for hospital staff to perform data entry, search patient records, and generate reports for hospital management.
   - Emphasized data security and compliance with medical data handling standards.
   - This project reflects strong skills in software development for healthcare, database design, and creating

efficient administrative tools.

3. **Student Management System: ->link**
    - Designed and developed an interactive web application for managing student information and automating registration processes in educational institutions.
    - The platform implements secure user authentication with features for account creation, password reset, and record deletion, ensuring data security.
    - Leveraged Streamlit for building a visually appealing frontend and Python for business logic, providing seamless data entry, validation, and retrieval.
    - Utilized SQLite as the backend database to store comprehensive student records—username, roll number, branch, and more—ensuring persistent, reliable, and searchable storage.
    - Integrated an intuitive sidebar menu, giving administrators quick access to key actions such as signup, searching students, displaying all records, and branch-specific management.
    - The application improves efficiency by replacing manual entries with a digital system, greatly reducing errors and streamlining administrative workflows.
    - Demonstrates proficiency in full-stack development, UI/UX design, database integration, and educational process automation through modern web technologies.
4. **Complex Calculator:**
    - Developed a sophisticated calculator application with a Python backend and custom-built APIs.
    - Designed and documented APIs using Swagger UI to provide interactive API exploration and testing.
    - Capable of performing a wide range of calculations including normal arithmetic, scientific functions, complex number operations, and matrix calculations.
    - Frontend built using HTML, CSS, JavaScript, and Bootstrap to ensure a user-friendly and responsive interface.
    - The backend APIs handle all calculation logic, demonstrating strong skills in RESTful API design, Python programming, and full-stack integration.
    - The project showcases proficiency in mathematical computation, API documentation, and building scalable web-based calculator tools.

EDUCATION

Dronacharya College of Engineering | Gurugram University — Gurgaon, India
Bachelor of Technology – Computer Science and Engineering: **8.5/10.0 GPA** — **2023 – 2027**

Holy Innocents Public School | Central Board of Secondary Education — Gurgaon, India
Grade 12th – Senior Secondary: **80%** — **2023**
Grade 10th – Secondary: **92%** — **2021**

CERTIFICATIONS

- Intership certificate **| link**
- C++| link
- DSA in C++ |link
- Foundation course on IR4.0 Technologies **| link**
